

Wiggins ZV13 Series Filter/Vent Assembly

Wiggins ZV13 Series Filter/Vent Assembly

- Extend fuel system component life
- Reduce operating costs
- Increase vehicle utilization
- Precision machined one piece aluminum bodies

Wiggins ZV13 Series Filter/Vent Assembly is designed to prevent contamination from entering the fuel system. The integration of the filter and the vent into one unit maintains the relief valving.

Features:

- Installs into the ZV10 Series vent mount.
- Filter integrated into the cap to prevent contamination from entering the housing during replacement.
- User friendly cap incorporates wrench or hand removal within one minute.
- Shield protects balls from tank turbulence during final seconds of refueling.
- Dust cover and screen prevents large objects from entering housing.
- Relief valve vents to atmosphere.
- Solid ground ball seats against stem to prevent spillage in case of vehicle rollover.
- Hollow float balls lift solid ball against seat to build up pressure to shut off nozzle.
- Body swivels 360°.
